

# THE FAMILY BANK FOR COMMERCIAL REAL ESTATE

Discover how history's most enduring families structured their capital to preserve and grow wealth for generations.

The Family Bank is a strategy where a family uses specially structured whole life insurance to build cash value that they can borrow against to finance their own investments, purchases, and opportunities instead of using traditional banks. Over time, the system is designed to keep capital compounding and circulating within the family across generations.

John Nebeker has nearly two decades of experience in financial services, earning multiple postgraduate degrees and industry awards. He specializes in implementing proven wealth-building strategies and, after years of researching and applying the Family Bank system for clients, authored *The Family Bank: The Key to Generational Wealth* (2020–2022).
